

Epithelial Cell Growth Supplement-2 (EpiCGS-2) Catalog #4162

Product Description

Epithelial Cell Growth Supplement-2 (EpiCGS-2) is a sterile, concentrated (100X) solution which contains growth factors, hormones, and proteins necessary for the culture of normal epithelial cells. The supplement is formulated (quantitatively and qualitatively) to provide an optimally balanced environment that selectively supports the growth of normal epithelial cells *in vitro*.

Product Use

EpiCGS-2 is for research use only. It is not approved for human or animal use, or for application in *in vitro* diagnostic procedures.

Note: Due to bovine pituitary extract (BPE) in the growth supplement, the color may vary with different lots and formation of lipoproteins can result in precipitates. This does not affect the biological activity.

Storage

Store EpiCGS-2 at -20°C; once added to medium, store at 4°C and protect from light. Do not refreeze after thawing.

Shipping

Dry ice.

Instructions for Use

For best results, use EpiCGS-2 in conjunction with Epithelial Cell Medium-2-b (EpiCM-2-b, Cat #4121-b).

Thaw EpiCGS-2 at 37°C. Gently tilt the tube several times to ensure complete mixing. (**Note:** the presence of BPE in the growth supplement may result in lipoprotein precipitates; this does **not** affect the efficacy of the supplement). Spray the medium bottle and supplement tube with 70% ethanol and wipe to remove excess liquid. In a sterile field, remove the caps without touching the interior threads with fingers. Add EpiCGS-2 to the medium and mix well. Since several components are light-labile, the medium should not be exposed to light for extended periods. We do not recommend warming medium in a 37°C water bath prior to use. When stored in the dark at 4°C, the reconstituted medium is stable for one month.

Caution: If handled improperly, some components of the medium may present a health hazard. Take appropriate precautions when handling it, including the wearing of protective clothing and eyewear. Dispose of properly.
